Building with Antigravity

Agentic Web Development Workshop powered by Gemini

Workshop Essentials

Google Antigravity

Ensure the Agentic IDE is installed and you are signed in.

Resume PDF

Have your resume ready on the desktop for the Agent to analyze.

Digital Assets

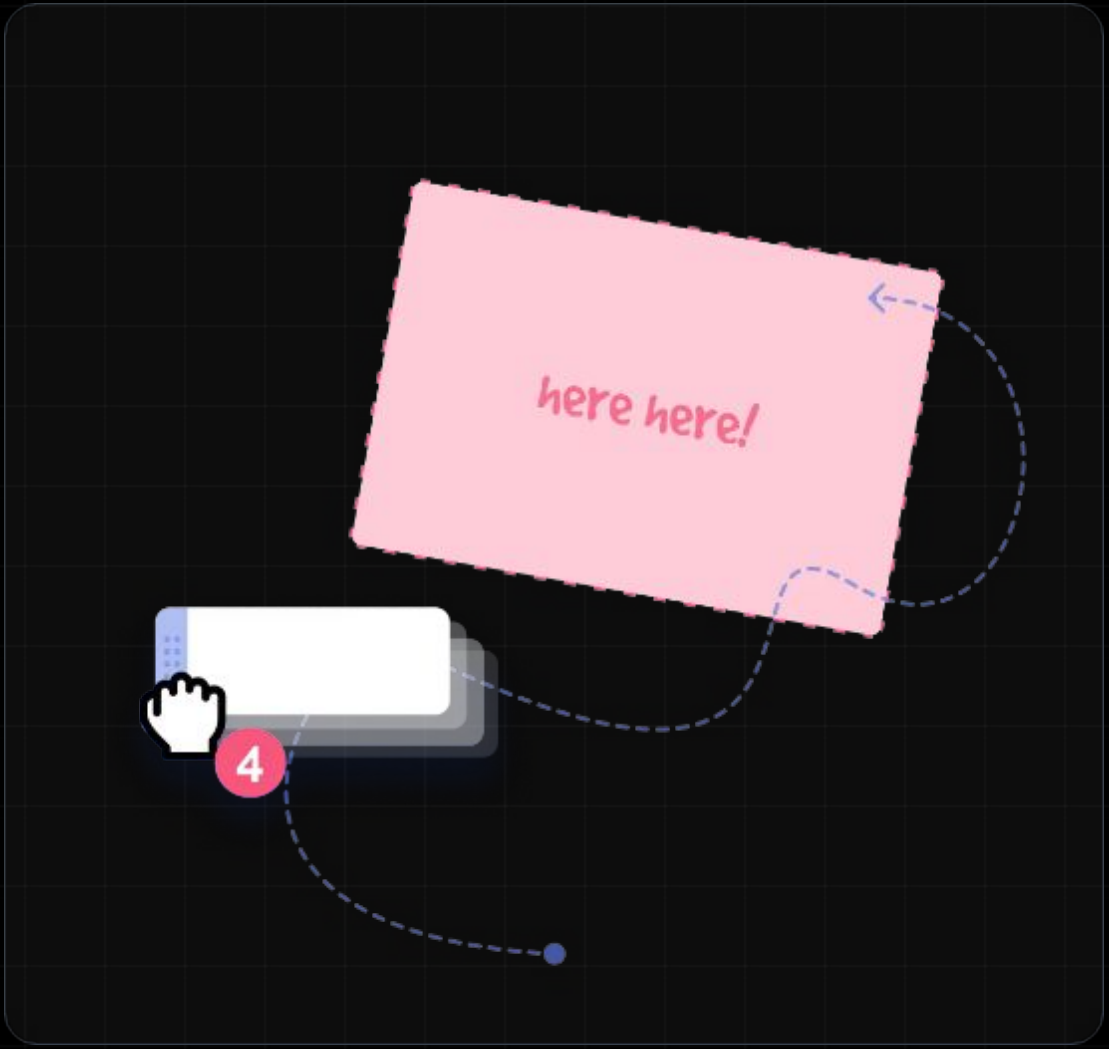
Gather your headshot, team photos, and diagrams into a folder.

Step 1: Organizing Visuals

Structured for AI

To help the Agent find your images, follow this strict structure:

1. Create a folder named **assets** in your project.
2. Drag & Drop your images into this folder.
3. **Rename** files clearly:
   - profile.jpg
   - project-alpha.png
   - team-photo.jpg



Critical Setup: Authentication

Deployment Permission

The Agent needs permission to push code to your GitHub. If the browser popup fails, use a Personal Access Token.

```
Backup Method (Token):

1. GitHub.com > Settings > Developer Settings
2. Personal access tokens (Classic)
3. Generate New Token (Select 'repo' scope)
4. Use this token as your
Password

in the terminal.
```

Phase 1: Context

Feed the Agent

We don't write code from scratch. We give the Agent context.

Action: Drag & Drop your Resume PDF directly into the Agent Manager chat window.

This allows Gemini 3 to "read" your history before building.

MY LIFE PHILOSOPHY

Success in trading requires a combination of research, analysis, and disciplined decision-making.

SUMMARY

Experienced stock trader with a passion for identifying profitable opportunities and optimizing investment outcomes. Proficient in financial analysis, risk management, and decision-making. Managed multi-million dollar portfolios and consistently achieved impressive results. Bachelor of Business Administration in Finance from the University of California, Los Angeles. Certified Financial Analyst (CFA) with expertise in equity research and technical analysis. Demonstrated ability to analyze market trends, execute trades, and implement effective risk management strategies. Committed to delivering superior performance and contributing to company success.

STRENGTHS

Analytical Thinking
Consistently analyzed market trends to identify profitable trading opportunities resulting in a 25% increase in portfolio value

Risk Management
Successfully implemented risk management strategies to protect investments and minimize losses resulting in a 10% decrease in overall risk exposure

Decision Making
Demonstrated strong decision-making skills by executing timely and informed trades resulting in a 15% average annual return

EXPERIENCE

Senior Stock Trader

ABC Investments

2022 - Ongoing New York, NY

Managed a multi-million dollar portfolio, conducting in-depth market research and analysis to identify investment opportunities. Executed trades based on market trends and investment strategies resulting in a 20% increase in portfolio value.

- Performed daily analysis of global financial markets to identify potential trade opportunities
- Executed trades using technical and fundamental analysis to optimize investment outcomes
- Developed and implemented risk management strategies to protect investments and minimize losses
- Collaborated with research team to evaluate market trends and investment opportunities
- Utilized advanced trading software to monitor portfolio performance and adjust trading strategies

Prompt 1: The Analysis

Verify the Data

Before asking for code, we ask for confirmation. This ensures the AI hasn't "hallucinated" a job title or skill you don't possess.

```
Mission: Analyze my resume

Instructions:
1. Read the attached resume.
2. Extract my Name, Headline, Summary, Top 3 Skills,
Work Experience, and Projects.
3. Output: Do not write code yet. Just confirm you have
extracted the details by listing them in a summary.
```

Prompt 2: The Architect

Generate the Build

We instruct the agent to build the files, specifying the tech stack and the location of our image assets.

```
Mission: Build portfolio from resume

Requirements:
1. Stack: HTML5, Tailwind CSS (CDN), script.js.
2. Sections: Hero, About, Experience, Projects.
3.
Assets:

Check the `assets/` folder. Use `profile.jpg` for Hero
section. Use `team.jpg` for About section.
4. Action: Create files and write code.
```

Enhancing with Visuals

What to Include

A picture is worth a thousand lines of code. Enhance your portfolio with:

- **Architecture Diagrams:** Show you understand systems, not just syntax.
- **Team Photos:** Demonstrate collaboration and soft skills.
- **Professional Headshots:** Build trust immediately in the Hero section.

Prompt 3: Refinement

Polish the Details

Raw AI output can sometimes be generic. Use this step to add "human" touches like expanded descriptions or contact forms.

You can also use the **Inline Editor** (Cmd+I) on specific text blocks.

```
Mission: Enhance Content & UI

1. Content: Expand project descriptions to be results-
oriented.
2. UI: Add a "Contact Me" section with a mock form.
3. Socials: Add a footer with GitHub/LinkedIn links.
4. Visuals: Add subtle hover effects to buttons.
```

Phase 3: Deployment

1. Create Repo

Go to GitHub.com
Create "New Repository"
Make it **Public**

2. Copy URL

Copy the HTTPS URL
(ends in .git)
e.g., github.com/user/repo.git

3. Agent Deploy

Paste URL into Antigravity
Run the deploy prompt

4. Go Live

GitHub Settings > Pages
Source: Main Branch
Save & Refresh

Prompt 4: Go Live

Agentic Terminal Control

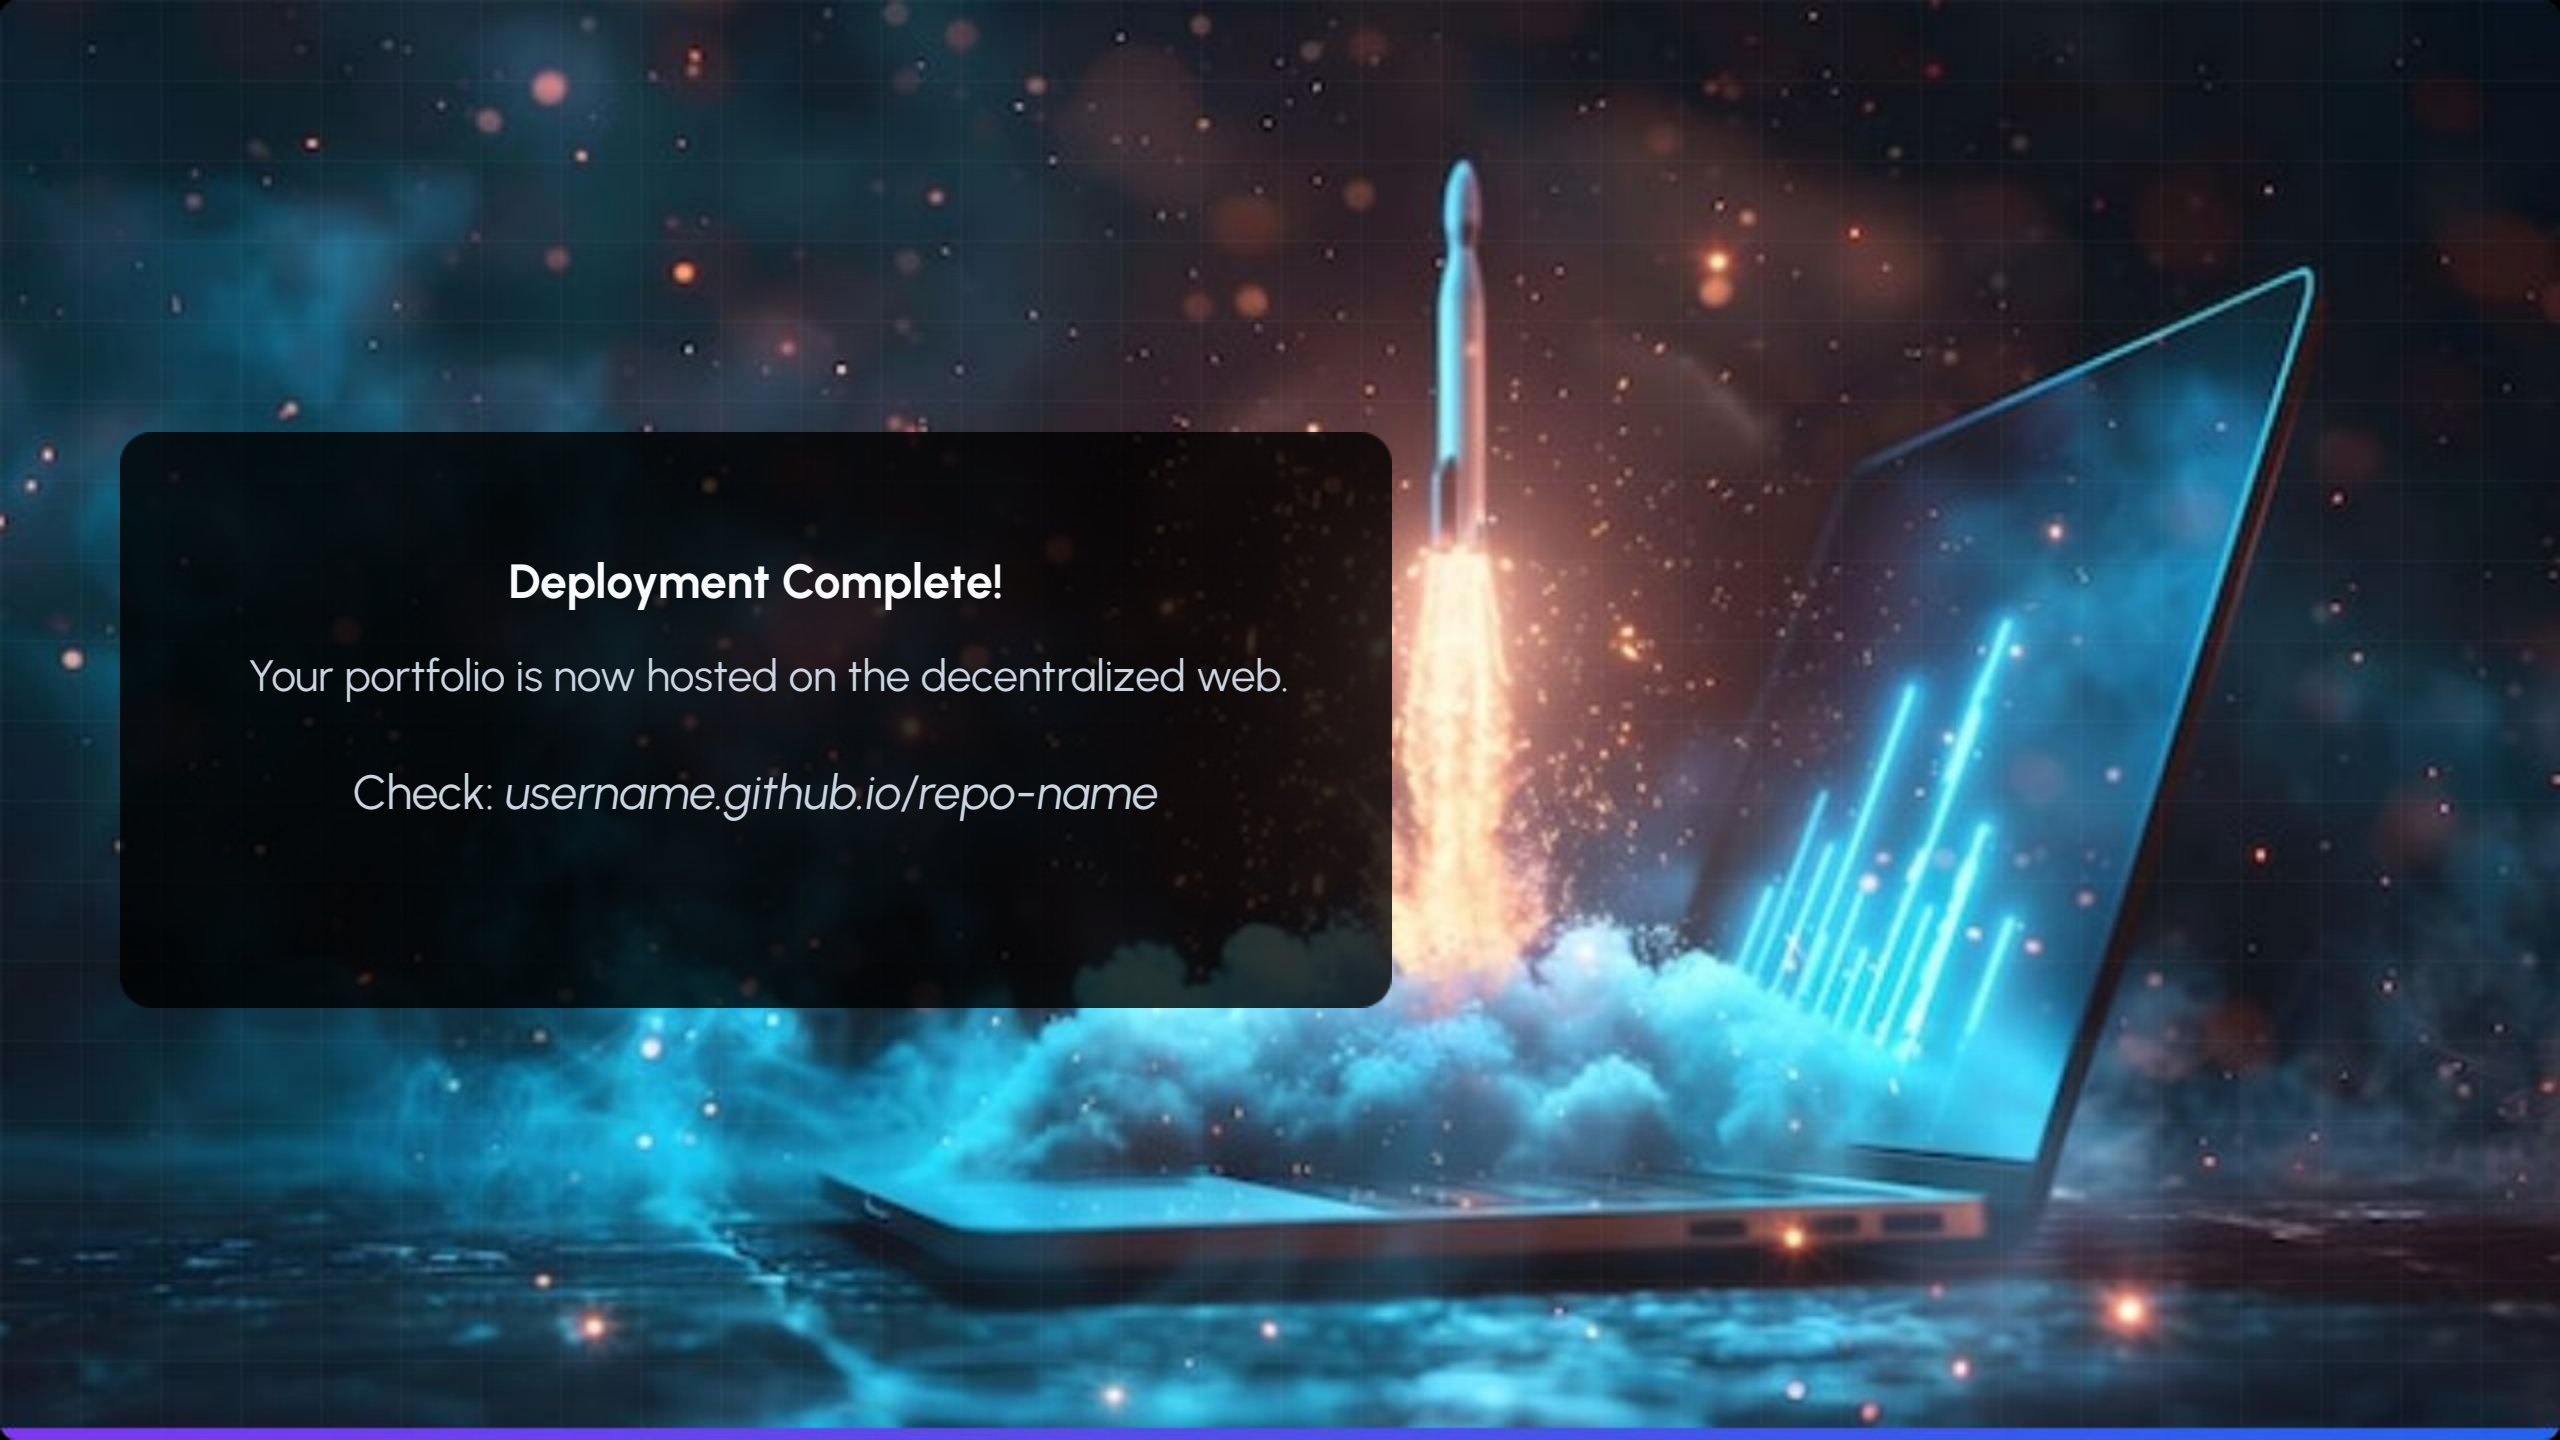
We don't need to memorize git commands. The Agent can execute the terminal workflow for us.

Warning: Watch your taskbar for a browser authentication popup during this step!

```
Mission: Deploy to GitHub Pages

Context: My remote repo is: [PASTE_URL_HERE]

Plan:
1. Init git, add all files, commit as "Initial build".
2. Add remote origin.
3. Push to main branch.
```



Deployment Complete!

Your portfolio is now hosted on the decentralized web.

Check: *username.github.io/repo-name*

Q&A

Let's debug any issues.
